reflecta Slideprojector 2000 AF

Automatic slide projector of the compact range for three magazine systems (Universal, CS and LKM Magazines). The economical way to outstanding projection.

reflecta 2000 AF (P/N 16110)

- **For 3 magazine systems**
  This projector is designed for use with Universal, CS and LKM magazines. You turn a small adapter lever on the slide changing arm downwards when using Universal magazines and you turn it upwards to use CS and LKM Magazines.
- **Automatic sharpness correction**
  With the infrared autofocus system all slides are scanned by a light beam and minor sharpness deficiencies are automatically corrected in a split second.
- **Dialift**
  The slide elevating system makes projection of single slides or editing and arranging slides in magazines an easy task. You only have to press the “Dialift” device slightly and it rises up automatically. Place the slide into the slot from the side and push the “Dialift” back into the unit, your slide is now projected. Using the “Dialift” you can exchange slides during projection or turn them round the right way.

- **Halogen lamp 24 V / 150 Watt**
  The powerful halogen lamp of high luminosity produces a brilliant image in natural colours.
- **Anti-jamming system**
  This system makes it nearly impossible for slides to get jammed and damaged in the slide guide. As soon as heavy resistance obstructs the mechanism, the slide transport becomes disengaged, before any damage can occur.
- **Overheating protection**
  A powerful cooling fan guarantees a careful and damagefree projection of your previous slides. An additional overheating protection device switches the projector off, if ever a critical temperature should be reached.
- **Lens**
  reflecta Agomar 2.8 / 85 mm
- **Weight** ca. 3,8 kg
- **Dimensions** approx. 245x244x119 mm
- **Made in Germany**
